

Ian Tai Ahn

Ogden, UT | (385) 208-8789 | iantaiahn@yahoo.com | iantaiahn.dev | github.com/ianTaiAhn

Software engineer with 3+ years delivering automation and data systems across regulated environments, with hands-on experience spanning backend development, cloud infrastructure, data pipelines, and LLM integration. Known for translating ambiguous business requirements into concrete technical designs and identifying the right questions to ask, the right proof-of-concepts to de-risk, and the right leverage points to move quickly. Built and shipped automation in DoD compliance contexts; applied LLMs to healthcare data problems through independent projects including a Medicare prior authorization rules engine. M.S. in Data Science. Comfortable operating across disciplines and moving between business conversations and implementation.

TECHNICAL SKILLS

AI & Agents: LLM APIs (Anthropic Claude, Groq, OpenAI), prompt engineering, RAG pipelines, tool/function calling, LLM-powered pipelines, structured output generation

Languages & Data: Python, SQL, Java, JavaScript, TypeScript, Shell, PostgreSQL, Snowflake, dbt, pandas, NumPy, Pydantic

Cloud & Infra: AWS, Azure, Docker, Kubernetes, APIs, webhooks, Prometheus, Grafana, Splunk, Helm, Ansible

MLOps & DevOps: CI/CD pipelines, GitHub Actions, Helm charts, Robot Framework, Flux, Kyverno

Frameworks & Tools: FastAPI, Flask, Spring Boot, React, Angular, Tailwind, Next.js, Linux, CLI, RESTful APIs, Git, Agile/Scrum

EXPERIENCE

Platform Engineer — Automation & DevOps | Lockheed Martin | Hill Air Force Base, UT | Apr 2024 – Present

- Owned automation pipelines supporting 30+ distributed services across multiple classified enclaves; designed integration patterns connecting Java microservices via RESTful APIs and monitored production health using Splunk
- Built automated validation workflows and CI pipelines achieving >80% test coverage and improving data reliability
- Automated compliance policy enforcement across all data services using Helm, Kyverno, Flux, and Ansible, eliminating manual review steps and enabling least-privilege access controls at scale with full auditability and added observability
- Partnered with engineering and product stakeholders to define data flow architecture and prioritize automation investments, translating business requirements into technical roadmap decisions across a distributed mission system
- Served as Scrum Master and Technical Lead; facilitated sprint planning with cross-functional stakeholders, conducted code reviews, mentored junior engineers, and created reusable workflow templates adopted across the team

Software Engineer — Systems Testing & Data Automation | Pratt & Whitney | Hill AFB, UT | Aug 2023 – Apr 2024

- Built Python automation pipelines to ingest and transform multi-table relational data across regression cycles, collapsing a ~10 hr/month manual process to seconds

PROJECTS

Prior Authorization Policy Compiler | Python, FastAPI, Groq LLM | github.com/ianTaiAhn/pauth_rc

- Built a configurable LLM-powered rules engine that ingests unstructured Medicare LCD policy documents, grounds clinical criteria against structured patient data, and generates ICD-10/CPT-coded checklists
- Deployed against Medicare LCD L36007 (Lower Extremity Major Joint Replacement) with production evals validating coverage criteria accuracy

Health Workforce Intelligence Dashboard | React, FRED API, SARIMAX | github.com/ianTaiAhn/healthcare_dashboard

- Built a domain intelligence tool surfacing forward-looking workforce trends for Utah healthcare organizations: SARIMAX forecasting on FRED API data, FastAPI backend with structured retrieval, and React dashboard end-to-end from data ingestion to business-facing output

EDUCATION

M.S., Data Science | Graduate Certificate, Computational Data Science & Machine Learning | Weber State University | GPA 3.85 | 2025

B.S., Computer Science | Weber State University | GPA 3.93 | 2023
